Research Interest

I study **language models with new architecture**, with my current focus on **continuous diffusion language models** and **speculative decoding**, both of which have the potential to enable fast language generation.

Highlights

LangFlow: Continuous Diffusion Rivals Discrete in Language Modeling

First continuous diffusion language model with better sample quality to masked diffusion on the GPT-2 scale.

UBTree: Parallel Tree Drafting via Unigram and Bigram Models for Speculative Decoding

State-of-the-art single-request speculative decoding method.

CBD: Scaling Continuous Block Diffusion (To come)

Scaling likelihood-based continuous diffusion language modeling with elucidated designs to 8B from scratch.

Education

University of Illinois, Urbana-Champaign, Computer Science, *PhD Student* Aug. 2025 – Present

Advisor: Jiaxuan You, Ge Liu

University of Southern California, Computer Science, *MS* Aug. 2023 – May 2025

Advisor: Jiaxuan You, Ge Liu

Shanghai Jiao Tong University, Computer Science and Technology, *BEng* Sep. 2018 – Jun. 2022

Advisor: Yang Hua, Guanjie Zheng

Work Experience

Research Intern, Pretraining of Language Models May. 2026 – Aug. 2026

Mentor: Jianguo Li LLaDA Team, Inclusion AI

- Re-designed likelihood-based continuous language diffusion for better maximum likelihood training.
- Pretrained continuous diffusion language models with 8B parameters under different network architecture.
- Developed speculative draft models with both parallel and tree-based decoding for Ling3-Flash-124B.
